Best browser app for android. Android browser app source code github.

Android browser app based on Custom Tabs protocol. Lynket utilizes Chrome Custom Tab API to create a customized browsing experience while adding innovative features like background loading with floating bubbles, article mode and multitasking using Android's recent menu. Lynket is available for free on the Google Play Store. If you have got some time, read the introduction post on my blog or watch intro Video Features Features Demo Web heads - Floating bubbles to load multiple links and launch them. Web heads - Intelligently manages background loading of Custom Tabs using Android's overview screen. Uses Lollipop Document API. Provider - Lynket works with any custom tab compatible browser. This means features like adblock, Google Account sync, data saver are inherited. Article mode - Filters all unnecessary content and renders web page on a RecyclerView efficiently. Uses Crux library. Minimize and Tabs - Lynket can minimize the tab and also show all active tabs for you to quickly switch to. Architecture and Code Structure Lynket is written on a MVVM Architecture and uses Dagger 2 for dependency injection. The source code is packaged based on feature. app/src/java/ \ \ shared\ utils\ Architecture Below outlines sample structure of most screens. Code Style mNo Hungarion notation. No Impl suffixes for interface implementations. Instead name based on what it does. Ex: AppStore and implementations AppDiskStore and AppSystemStore. All new modules are preferred to be written in Kotlin Formatting - Android Studio Default. Contributions You are more than welcome to contribute to Lynket's development. New features are branched off of develop . PRs are welcome against the develop branch. How you can help: Grab an issue from issues section that interests you. Unit testing using Roboelectric and Dagger 2 is already setup but coverage is rather low. Adding tests to existing features would greatly help! Refer src/test/. Break the ice. Feel free to create an issue to discuss your ideas. License Lynket is licensed under the GNU v3 Public License. Page 2 Android browser app based on Custom Tabs protocol. It contains default implementations of many of the common tasks a developer will find themselves requiring, for example: Creating a Launcher Activity that simply launches a Trusted Web Activity. Code for choosing an appropriate Custom Tabs provider. Creating an Activity to launch the browser's site settings for a TWA. Adding Android Browser Helper to an Android project Android Browser helper is available on the Google Maven. To use it, modify your application's build.gradle and add the library as a dependency, as described below: dependencies { //... implementation 'com.google.androidbrowserhelper:androidbrowserhelper:2.3.0' } Information for Google Play's data disclosure requirements The Android Browser Helper library is intended to allow Android applications to interact with browsers on the device. As such, it will share certain types of information with the browser. Data types collected / shared Web browsing: URLs handled by the application are shared with the browser when a Custom Tab or a Trusted Web Activity are launched. URLs are also shared with the browser by certain features like mayLaunchUrl(), so that the browser can speed up loading performance of those pages. When the WebView fallback feature is enabled by the developer, the application may store the navigation history and browser storage, like cookies on the device. User location (Optional): The SDK may share location data with the host browser, when the location delegation library is used. Users can control sharing of the location using the Android permission dialogs and the System settings. Purchase History (Optional): The SDK may share purchase history data with the host browser when the Google Play billing library is used. Only purchases made within the application are shared. This SDK does not transfer any information over the network. Web browsing information may be stored if the WebView fallback is enabled. The permission to read the location can be managed via the usual Android settings. Source Code Headers Every file containing source code must include copyright and license information.
